

200 Maritime Academy Drive Vallejo, CA 94590

Cal Maritime Police Department (CMPD) has equipped its police officers with body-worn camera (BWC) technology. The use of body worn cameras will benefit the Cal Maritime Academy community and local community by increasing accountability and transparency from CMPD officers while they continue to strengthen relationships to the people they are committed to serve.

A body worn camera is a small camera secured on the uniform of a police officer, which objectively records the video and audio of interactions between police officers and the public. The camera is most often secured on the police officers chest facing forward.

Cal Maritime Academy police officers, corporals, sergeants and command officials.

CMPD currently uses the Axon Body-Camera 3 to capture video and audio and its cloud-based video management system (VMS) at Evidence.com to store captured video-audio. To learn more about the Axon Body-Camera 3 or Evidence.com, visit www.axon.com.

Greater Transparency

Promotes accountability

Evidence collection

Deters criminal activity and disorderly behavior

Assists officers with accurate report writing and supporting testimony in court
